

## MANAGED UTILITY CONSULTANTS

If you feel your overpaying for your energy bills and want more time to run your estate affairs, then let PHS Green manage your energy communications for you.

Reducing costs is one thing whilst at the same time actively helping to restore order for the environment is another, PHS Green achieves both at the same time.

This is a seamless no fuss managed service with guaranteed results. Our private confidential utility management service is for large scale residences and commercial venues. Let us manage your energy supplier for you to reduce your costs and reduce your properties carbon output and contribute to the nations carbon reduction target by 2030.

We are a not-for-profit organisation helping our private clients to make sense of their property's utility supply chain.

We're 100% independent working with complete discretion with proven large-scale savings and improved services all round for a wide range of celebrity and business leaders across the UK. We believe that our clients should reduce their costs and improve services no matter who they may be and be part of the global movement for environmental healing.

### What is the cost?

We charge a consultancy fee that still provides an annual saving, so it costs our clients nothing and delivers a reduced energy cost.

In addition to this, based on your savings each year we plant broadleaf trees. Through this, we can assess how much clean air is put out by each tree over a period of time an action our clients can be proud of for future generations.

It's time to act now to reduce the global impact for us all with climate change. Receive an academic report on your property's climate improvement schedule.

It takes nine broadleaf trees to absorb just 1 tonne of carbon over 20 years so working with PHS Green now is an essential part of global health and restoration.

PHS Green is not an energy provider, we use our in-depth knowledge and communication to help our private clients to restore energy and environmental order and be clear as to what is heating their homes and schools.

PHS Green = reduced energy costs with the right supplier = no complicated lock ins = certification on carbon reduction = more time and less worry back to you.
